Portfolio: <https://joonhokim.dev>

Frontend Engineer with extensive hands-on experience spanning the React ecosystem (including Next.js & React Native), Desktop apps (Electron), and Dapps (Web3). Proven capability to operate with strong technical ownership in both Korean and global remote work environments—exceling at proactively identifying system bottlenecks, sharing technical insights, and leveraging a strong background in web design to deliver exceptional UI/UX.

PROFESSIONAL EXPERIENCE

Frontend Developer (Freelance / Contract) 2020 - Present

AI (LLM) Mobile Application - Tokyo, Japan (Remote)

Frontend Developer Nov 2025 – Feb 2026

- Developed the frontend of an AI-powered mobile application using React Native, integrating LLM-driven features into core user workflows
- Built scalable UI architecture and reusable component systems
- Optimized rendering performance for LLM-driven features within the application
- Ensured consistent behavior across iOS and Android by handling platform-specific differences
- Implemented end-to-end testing using Detox to improve app stability and reliability
- Collaborated with Japan and Taiwan teams in a multilingual environment

B2C Platform (E-commerce) - Tokyo, Japan (Remote)

Frontend Developer Sep 2024 – Dec 2024

- Developed frontend for a Japanese B2C service platform (e-commerce domain)
- Built and maintained 6 business-specific dynamic pages with optimized UI/UX
- Designed and implemented reusable UI components and a consistent design system
- Refactored a fragmented frontend codebase into a unified and scalable architecture, removing redundant logic and improving maintainability and development efficiency
- Delivered stable release under tight deadlines in a pre-launch environment
- Integrated multiple libraries to handle complex UI variations and responsive layouts
- Utilized Datadog for real-time monitoring, enabling rapid issue detection and post-release stability

Web3 Campaign Platform - Tokyo, Japan (Remote)

Frontend Developer Aug 2023 – Aug 2024

- Played a key role in frontend development and scalable architecture design for multiple Web3 campaign projects using Next.js and TypeScript
- Integrated Web3 functionality including wallet connectivity (wagmi, RainbowKit) and smart contract interactions, enabling seamless on-chain user experiences

- Implemented end-to-end frontend flows for NFT minting, handling user interactions, wallet connectivity, and transaction state management
- Developed a CLI tool for Merkle tree generation, streamlining whitelist workflows and later adopted as an internal tool across the team
- Resolved compatibility issues across Web3 libraries and optimized Next.js configurations, improving overall stability and performance
- Implemented multilingual support (i18n) and multi-region SMS authentication flows with international phone number handling
- Built responsive UI for both desktop and mobile using TailwindCSS and SCSS, including GSAP-based interactive animations
- Integrated backend APIs using SWR and managed complex asynchronous data flows for real-time user interactions
- Solved Safari (iOS/macOS) video autoplay issues under low power mode
- Collaborated in a cross-functional team (frontend, backend, blockchain, SRE, designers) in a global environment
- Conducted code reviews, bug fixing, and ongoing maintenance to ensure stable releases

Additional Experience

Developed a keen eye for detail and seamless design-to-code translation skills through 9 years of professional design experience, forming a robust foundation for user-centric frontend engineering.

Frontend Development

Sep 2020 – Present

Built production-ready web, mobile, and desktop applications using React, Next.js, React Native, and Electron, focusing on scalable architecture, reusable UI systems, and responsive user experiences.

UI Development & Web Design

2011 – 2020

Designed and developed responsive web interfaces using HTML, CSS, and JavaScript, building a strong foundation in UI/UX and design-to-code workflows.

EDUCATION

Korea National Open University, Busan, Korea

Bachelor of Science in Computer Science, 2025

TECH SKILLS

Languages: TypeScript, JavaScript

Frameworks & Libraries: React, Next.js, React Native, Electron

State Management /

Data Fetching: Redux, Redux Toolkit, Zustand, Context API, React Query, SWR

Testing: Vitest, Detox

Styling: TailwindCSS, SCSS, styled-components

Web3: wagmi, RainbowKit, Ethers.js

Tools & Services: Git, Docker, Firebase, Vercel, AWS, Google Cloud

Platforms: App Store, Google Play

Other: i18n, Responsive Design, Production-ready Application Development
