Portfolio: <https://joonhokim.dev>

Frontend Engineer with extensive hands-on experience spanning the React ecosystem (including Next.js & React Native), Desktop apps (Electron), and Dapps (Web3). Proven capability to operate with strong technical ownership in both Korean and global remote work environments—excelling at proactively identifying system bottlenecks, sharing technical insights, and leveraging a strong background in web design to deliver exceptional UI/UX.

PROFESSIONAL EXPERIENCE

Frontend Developer (Freelance / Contract) 2020 - Present

AI (LLM) Mobile Application (React Native) - Tokyo, Japan (Remote)

Frontend Developer Nov 2025 – Feb 2026

- Designed a responsive, common UI component system capable of adapting flexibly to frequent planning and design changes.
- Verified SSE (Server-Sent Events) protocol specifications with the backend team and optimized AI text-streaming data integration.
- Proposed and implemented an automated type-generation process to prevent frontend type mismatches caused by backend API updates.
- Proactively shared development automation insights and latest tech trends within the team, significantly improving overall workflow efficiency.
- Established E2E test scenarios for core user flows using Detox and prevented bug regressions, achieving a 100% pass rate across 40 test cases.
- Conducted global collaboration via Slack, communicating in Japanese with the Japan team and in English with the Taiwan team.

Japanese Infrastructure & Fintech Platform - Tokyo, Japan (Remote)

Frontend Developer Sep 2024 – Dec 2024

- Developed 6 business-specific dynamic pages and drove UI/UX improvements based on complex business requirements.
- Designed and implemented data validation protocols utilizing Zod and React Hook Form.
- Built reusable, web-standard responsive UI components and established a shared internal design system.
- Refactored a fragmented frontend codebase into a unified architecture, enhancing maintainability and development efficiency.
- Analyzed issues, implemented exception handling within a Next.js App Router environment, and managed real-time monitoring via Datadog.
- Conducted rigorous code reviews and ensured stable production deployment in a global pre-launch environment.

Web3 Campaign Platform - Tokyo, Japan (Remote)

Frontend Developer

Aug 2023 – Aug 2024

- Implemented global wallet connectivity and NFT Staking/minting transaction flows using wagmi, RainbowKit, and Ethers.js.
- Integrated GSAP and Framer Motion into the Next.js environment to build high-quality interactive UIs without performance degradation.
- Analyzed edge cases in complex authentication processes and established defensive logic to handle rejection reasons, securing system stability.
- Independently designed and distributed a CLI tool for Merkle Tree generation to validate blockchain transmission data, successfully adopting it as a standard internal tool.
- Streamlined static content management by integrating microCMS, optimized i18n-based localization, and enhanced global SMS authentication.
- Led the frontend architecture design during collaboration with Turingum K.K., where the structure was highly recognized and officially adopted as the educational reference for junior developers.

Additional Experience

Developed a keen eye for detail and seamless design-to-code translation skills through 9 years of professional design experience, forming a robust foundation for user-centric frontend engineering.

Frontend Development

Sep 2020 – Present

Built production-ready web, mobile, and desktop applications using React, Next.js, React Native, and Electron, focusing on scalable architecture, reusable UI systems, and responsive user experiences.

UI Development & Web Design

2011 – 2020

Designed and developed responsive web interfaces using HTML, CSS, and JavaScript, building a strong foundation in UI/UX and design-to-code workflows.

EDUCATION

Korea National Open University, Busan, Korea

Bachelor of Science in Computer Science, 2025

TECH SKILLS

Languages: TypeScript, JavaScript

Frameworks & Libraries: React, Next.js, React Native, Electron

State Management /

Data Fetching: Redux, Redux Toolkit, Zustand, Context API, React Query, SWR

Testing: Vitest, Detox

Styling: TailwindCSS, SCSS, styled-components

Web3: wagmi, RainbowKit, Ethers.js

Tools & Services: Git, Docker, Firebase, Vercel, AWS, Google Cloud

Platforms: App Store, Google Play

Other: i18n, Responsive Design, Production-ready Application Development
